

- Everything is so great. 5/5
- Nominate for best paper. much wow. such research.

Introduction

- “Gig work” is not a new thing; piecework has been around since the 19th century, and a lot of that research and work can inform this.
- why has the notion of “on the side” work changed? This seems too important to dismiss out of hand.
- The questions the paper claims to answer are the following:
 1. What components are inextricable from successful markets?
 2. what can be disentangled?
 3. how would worker-run groups operate themselves?

Let’s see if this gets answered...

Background

- **Collective Action** sounds unrelated to the topic introduced earlier; worker-centric labor markets are different from worker-run labor markets, and it sounds like this is conflating the two; did I miss that connection? The only thing I see that really makes a strong connection in the introduction is the vague reference to “giving workers a sense of locus”, but that’s not entirely the same as worker-run markets...

Background

Seems fine
